
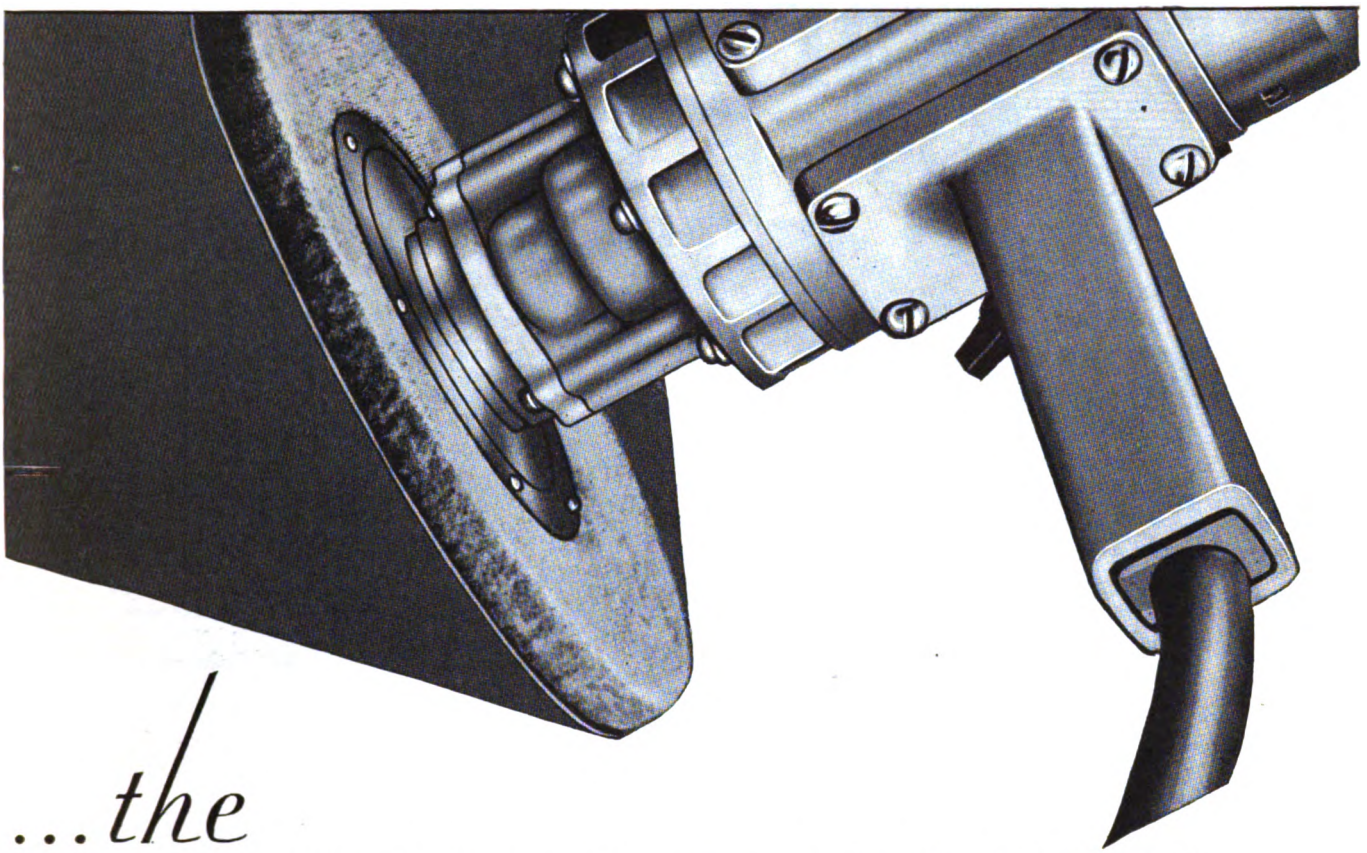
Now YOU CAN GRIND *and* POLISH



...*the* MILLERS FALLS WAY *with extra speed and power*

The same quality, the same advanced improvements which have made Millers Falls Drills outstanding in the Electric Tool Field are built into this new Portable Disc-Sander—extra power, added speed, light weight.

In addition, this new power tool has an outstanding advantage. Wood dust and metal particles cannot injure the Millers Falls Disc-Sander. A new improvement, the Millers Falls centrifugal dirt separator, prolongs the life of the motor and keeps this tool out of the repair shop. The separator, a disc revolving at motor speed, throws all dust particles into the air, thus preventing their entrance into the motor.

Ask your distributor to arrange a test and try this new power tool on your own work. Use the coupon for the new Electric Tool Catalog showing the complete line.

A COMPLETE RANGE *of Price and Power*

in MILLERS FALLS ¼ INCH *Electric Drills*

No. 214
¼ inch Light Duty

No. 414
¼ inch Standard

No. 514
¼ inch Heavy Duty

NO matter what your needs or what jobs you have calling for ¼ inch drills, a Millers Falls will suit your purse and your requirements. A complete range, from the No. 214 Light Duty for $25.00 designed for light and intermittent service, and the No. 414 Standard for $30.00 suitable for regular production work to the No. 514 Heavy Duty for $43.00 capable of standing up under rated load at continuous operation without overheating.

And you will find Millers Falls quality built into every one of these ¼ inch drills—more power per pound of weight; Millers Falls system of ventilation resulting in the lowest temperature rise load for load; great durability, meaning better staying powers on the job and longer life; less weight per horse power output.

We want you to test out these power tools on your own work. Convince yourself of their fitness for your needs. Ask any Millers Falls distributor to arrange a test—or write us. We will be glad to send you the new Electric Tool Catalog showing the complete line—Drills ranging from ¼ to ⅞ inches, Electric Screw Drivers, Hammers, Grinders and other power tools.

CYLINDER GRINDING means *big money* . . if you use the PROPER TOOLS

No. 734
¾ inch Drill

The difference between profitable and costly work is the time you have to spend to do a good job. And in cylinder grinding, you can often save hours on a single job by the use of proper tools.

Honing stones made by reputable manufacturers are designed for operation at a specific speed. Fast removal of metal in cylinder reconditioning depends on speed and a light cut—not on heavy "hogging out" pressure cutting.

The new Millers Falls ¾-inch Drill, No. 734, is made especially for cylinder grinding. It is equipped with taper roller bearings in the spindle. Its speed, torque and horsepower will give you exactly what you need for fast expert cylinder reconditioning.

Call up your distributor today. Ask him to put on a cylinder grinding demonstration for you. Then try any other drill on a cylinder of the same car and compare the time. You'll be convinced that cylinder grinding means big money—if you use the Millers Falls No. 734 Drill.

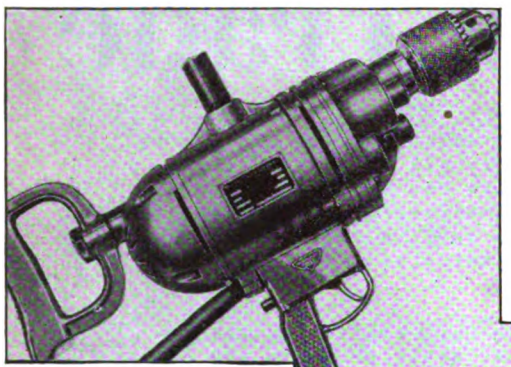
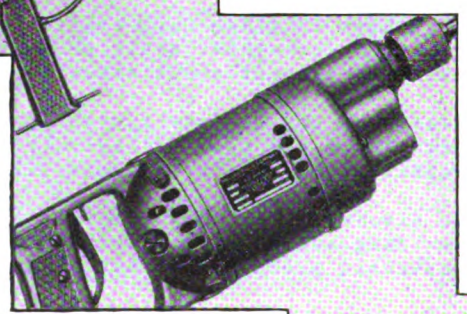
MAKING GOOD!

This COMPLETE LINE wins on merit

Study the facts



¾ Inch Drill No. 734



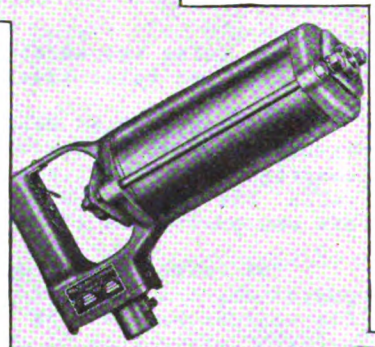
No. 1 Electric Screw Driver

During the past year Millers Falls Electric Tools have challenged the world on merit—have been tested by thousands of prospective buyers on their own work—have made good in test, competition and gruelling service.

They include Electric Drills from ¼ to ⅞ inch; Electric Screw Drivers with capacity to No. 20 x 4" wood screws; Electric Hammers from ⅝ to 2 inch capacity in concrete; Electric Grinders, both pedestal and bench; Portable Electric Disc-Sander; Portable Electric Grinder.

FACTS—

from actual Competitive Tests



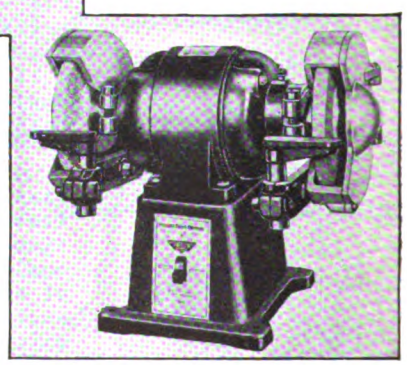
Electric Hammer No. 1816

POWER—Put up against the hardest kind of work, they continue to operate under full load without stalling.

VENTILATION—Load for load the lowest temperature rise, these tools reduce to a minimum the trouble and repairs caused by overheating.

DURABILITY—Greater staying powers on the job — meaning longer life.

WEIGHT—Less weight per horse power output, thereby reducing fatigue and increasing efficiency on the part of the operator.



6-inch Bench Grinder No. 506

Test out Millers Falls Tools on your own work. Then buy on performance and facts. For information on the whole line send for new Electric Tool Catalog No. 2, which gives complete descriptions and specifications.
